

2022 Carrot Variety Trial Data Collection Sheet

Field evaluation:

Rate attributes at 3 early-season dates (14, 30, and 50 days after seeding) and at harvest.

Early-season evaluations are great times to scout for pest, disease, and climatic pressures. For each trait, **survey all of the varieties** to get a feel for the range of characteristics they show. **Rate varieties on a scale of 1-5 using the rubric in your protocol**, rather than ranking them best to worst. **Trust your judgment** and your knowledge of the crop! **If a trait doesn't apply to your planting**, please just leave it blank. **We encourage you to add pictures and free-form notes about these varieties!**

Using SeedLinked:

This worksheet is intended for use with the SeedLinked online platform (www.seedlinked.com).

After recording observations on this sheet, please **log into your SeedLinked account** to enter your ratings (1-5 stars) online.
